Smart Technology Services (STS) introducing all in one solution equipment for easy integration of Fingerprints' T-shape™ biometric sensor

Ingré, FRANCE, April 16, 2018 - Based on its **Smart Evol 1000**, desktop smart card personalization equipment, **Smart Technology Services (STS)** has developed a specific implanting module to support the embedding of Fingerprints' T-shape biometric touch sensor module into smartcards.

Fingerprint Cards AB (Fingerprints), is the world's leading biometric company with its roots in Sweden, whose mission is to spearhead the development of biometric interaction.

This new module offers an easy way to embed the T-shape biometric sensor module, very cost effective, facilitating a quick start for pilots and medium sized volume.

Smart Evol 1000 Embedding module

Using a proven and reliable process that is already massively deployed for manufacturing dual interface cards, **Smart Evol 1000** embedding module is targeting card manufacturers who intend to use ACF for their implanting process.
